Emerald NRG enhances the value of crops

The mixture of the two fungicides guarantees:

- **Preventative activity**
  - Inhibition of appressorium function and germ tube growth

- **Curative activity**
  - Stops mycelia growth and colonisation

A reliable solution against many diseases for many crops

**Row crops:** Powdery Mildew, Rusts, Septoria, Cercospora, Ramularia, Sheath Blight.

**Vegetables:** Powdery Mildew, Early and Late Blight, Cladosporium.

**Top fruits:** Scab, Anthracnose, Diplodia Stem End Rot.

Double mode of action

The synergy of the different modes of action of the two active ingredients ensures this mixture significantly reduces the chances of resistance to fungicides in the fields.

**Tetraconazole 80 g/l**

**Azoxystrobin 100 g/l**

THE BEST DOUBLE-ACTION SOLUTION FOR GROWERS
Emerald NRG is able to activate a series of cascading genes in plants and improve their ability to overcome all conditions of growth under stress.

**Excellent selectivity**

- No interference with Phyto(sterols) biosynthesis
- Absence of PHYTOTOXIC EFFECTS

- No interference with Gibberellins biosynthesis
- Absence of DWARFING EFFECTS

**Other benefits**

**Emerald NRG** is able to activate a series of cascading genes in plants and improve their ability to overcome all conditions of growth under stress.

**Favourable ecotoxicological profile**

**Compatible with most of crop protection products**

Isagro S.p.A reserves the right to update or modify this information at any time without prior notice. “Emerald NRG” is a plant protection product. Use plant protection products safely; always read the authorized label and product information before use. Follow the safety precautions on the label.

---

**Enhanced Systemic Protection**

Optimal balance between HYDROSOLUBILITY and LIPOSOLUBILITY guarantees:

- Quick penetration and absorption through the cuticle
- High systemicity
- Even distribution into plant tissues
- Prompt redistribution and an even coverage of the treated surface

---

**Excellent Formulation**

**HYDROSOLUBILITY**
